Medical Fraud Detection
Windows Run Guide

Project folder:

`C:\Users\Anu\Desktop\Ashu\Datasciencecap\medical_fraud_detection`

This guide explains how to run the project on a fresh Windows laptop.

The project now auto-checks Python, virtual environment health, and missing libraries.

Recommended launch command:

`start_project.cmd`

PowerShell equivalent:

`powershell -ExecutionPolicy Bypass -File .\start_project.ps1`

Fresh Machine Setup

1. Open Command Prompt or PowerShell in the project folder.

2. Run the launcher below.

```
start_project.cmd
```

What it does automatically:

- checks for Python 3

- downloads and installs Python 3.12 if needed

- creates or repairs .venv

- installs required dependencies from requirements.txt

- starts the Streamlit dashboard

If PowerShell script execution is restricted, use:

```
powershell -ExecutionPolicy Bypass -File .\start_project.ps1
```

Optional Packages And Pipeline

To install optional ML and Neo4j packages too:

```
start_project.cmd -InstallOptional
```

To force a clean reinstall of the environment:

```
start_project.cmd -ForceReinstall
```

To rerun the full end-to-end pipeline:

```
powershell -ExecutionPolicy Bypass -File .\run_pipeline.ps1 -InstallOptional
```

To rerun the pipeline and load Neo4j tables into a live Neo4j database:

```
powershell -ExecutionPolicy Bypass -File .\run_pipeline.ps1 -InstallOptional
-LoadNeo4j
```

Useful URLs And Files

Streamlit dashboard:

http://localhost:8501

Neo4j Browser:

http://localhost:7474

Main scripts:

- `start_project.cmd`
- `start_project.ps1`
- `setup_local.ps1`
- `run_dashboard.ps1`
- `run_pipeline.ps1`

If needed, reopen the terminal inside the project folder before rerunning commands.
